

Rid Yourself from Continuous Load Shedding

- ◆ ESL offers cost effective, state of the art and instant energy solutions for corporate clients / domestic users by introducing Aksa Portable Generator Sets from Turkey. This product is compact, cost effective, and easy to operate, easy to transport, move around, and environment friendly. It is not only ideal for homes but for offices and shops alike.
- ◆ These sets are of very high quality, which is the hallmark of all Turkish products. They conform to EC standards and are the brand of choice for highly demanding Turkish market.
- ◆ These Generators not only operate on Gasoline but also are convertible on Natural Gas as well using ordinary connection (with necessary approval from the concerned authorities by user / purchaser / owner). The operation on gas does not affect the dependability, reliability and life in any way. On the other hand, the savings which ensue as a result of switching from gasoline to gas are enormous, and the cost of the equipment may be paid back many times over in its life time.
- ◆ We have a special offer for corporate clients, which is intended to give their employees a respite from the continuous torture at the hand of incessant and relentless power crisis. This offer consists of:
 - ◆ Supplying generators on soft payment terms provided the Company places the order.
 - ◆ Free transportation.
 - ◆ Free installation excluding material, house wiring etc
 - ◆ Two free visits during the warranty period.
- ◆ We hope our offer is useful in enhancing the efficiency of corporate employees by ensuring peace of my mind while at work or resting at their homes.
